

The Ground Mount Kit is used to support the Clothesline in a location where wall mounting is not possible.

The Ground Mount Kit is suitable for installation into clear ground, however if the ground surface is concrete, the Mounting Plate Kit is also required.

Contents

Your carton should contain the following parts:

2 x Posts 1 x Accessory Bag

1 x Cross Bar

Choosing a Suitable Location

Check that your chosen location has suitable side and front clearance. Allow 50cm side clearance and 100cm front clearance.

Assembly *(Figure 1)*

1. Attach the Cross Bar and Clothesline wall brackets to the Ground Mount posts.
2. We suggest attaching the Clothesline side arms to the Ground mount posts at this stage of the installation by referring to the clothesline instruction sheet.
Don't attach the Clothesline front bar or line cord yet.

In-Ground Installation *(Figure 2)*

1. In your chosen location, mark two holes on the ground 2200mm apart for the posts.
2. Dig the two holes to a depth of 400mm and fill with 50mm of gravel, for drainage.
3. Place the assembled Ground Mount unit into the holes you've just dug. The cross bar should be level, and at a height of 110mm (11 cm) above the typical users height.
The height and level of the cross bar can be adjusted by:
 - Increasing or decreasing the depth of the holes, or
 - Cutting the Mounting Posts down in height (only cut the end that goes in the ground).
4. Concrete the Mounting Posts into the holes, checking the following before you start and during concreting:-
 - Post spacing is 2200mm between centres.
 - Mounting Posts are vertical - check with a spirit level.
 - Cross bar is horizontal - check with a spirit level.
5. Clean any excess concrete from the posts with a damp cloth. Allow the concrete to set for 24 hours before attaching the Clothesline front bar and line cord.
